CSV

- Splitting CSV file
- Remove duplicates

Splitting CSV file

Splits the provided file into parts with chunk size.

Script: split-csv.py

Usage:

```
python split-csv.py <csv_file_path> <rows_per_file>
```

Example:

```
python split-csv.py file.csv 10000
```

Remove duplicates

Generates a new file without duplicates, but keeps empty cells.

Script: rdups.py

Usage:

```
python rdups.py <csv_file_path> <column_name>
```

Example:

```
python rdups.py /path/to/file.csv "phone number"
```
