

CSV

- [Splitting CSV file](#)
- [Remove duplicates](#)

Splitting CSV file

Splits the provided file into parts with chunk size.

Script: [split-csv.py](#)

Usage:

```
python split-csv.py <csv_file_path> <rows_per_file>
```

Example:

```
python split-csv.py file.csv 10000
```

Remove duplicates

Generates a new file without duplicates, but keeps empty cells.

Script: [rdups.py](#)

Usage:

```
python rdups.py <csv_file_path> <column_name>
```

Example:

```
python rdups.py /path/to/file.csv "phone number"
```
